

Factory:

The Tata based factory: Tata Steel, Jamshedpur

heavy machinery, high risk environment (blast furnaces, rolling mills, overhead cranes, molten metal handling)

factory type: Steel/Heavy Manufacturing plants generally

India recorded 742 factory and machine accidents in 2024 resulting in 660 deaths and notably factory accidents have become increasingly deadly with nearly 89 deaths occurring for every 100 accidents in 2024. on 8 June 2026 an explosion at the Visakhapatnam Steel Plant claimed multiple lives and left several workers injured

A **steel plant** is a perfect example of a dangerous factory because it has exactly the kind of risks our system is designed to handle.

- **Big machines everywhere**
Like cranes and rolling mills that move and press heavy metal.
- **Very high heat**
Molten metal is extremely hot.
- **Many workers working together**
Lots of people moving around at the same time
